

Ms. Jane Hupe is the Envoy of the ICAO Secretary-General to UNFCCC COP. Ms. Hupe holds the position of Deputy Director responsible for the Environment programme at the International Civil Aviation Organization (ICAO) and also serves as the Secretary of the ICAO Council's Committee on Aviation Environmental Protection (CAEP). Ms. Hupe has a vital role in providing leadership for ICAO's efforts to define and promote policies and Standards for environmentally sustainable aviation, managing a portfolio that includes aircraft noise, local air quality, global climate, clean energy and sustainable aviation fuels (SAF), adaptation, circular economy and a global market-based measure for international aviation. She currently leads the Organization's efforts on green innovation for mitigation and adaptation, as well as on the clean energy transition of international aviation.

Ms. Hupe was at the forefront of the conceptualization and development of the ICAO Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA), which was agreed in 2016 as the first global market-based mechanism for any industry sector. She ensures that "CORSIA is on track" by leading its implementation strategy, including putting in place the necessary regulatory frameworks and tools whilst ensuring that "no country is left behind" by implementing ACT-CORSIA (Assistance, Capacity Building and Training for CORSIA).

Under her leadership, ICAO adopted in October 2022 the ICAO long-term aspirational goal (LTAG) of Net-Zero aviation CO₂ emissions by 2050, and has further adopted the ICAO Global Framework for SAF, LCAF and other Aviation Cleaner Energies in November 2023. Together with global policy and standard setting, vital components of this Framework are capacity building and assistance, as well as financing. In this regard, the ICAO ACT-SAF programme was established to facilitate States' actions on clean energy and the ICAO Fininvest Hub is being developed to support access to financing for cleaner energy in aviation.

Prior to 1998, Ms. Hupe worked for the Brazilian Civil Aviation Authority and as a consultant with ICAO's Technical Cooperation Bureau.
